

Success Index to Measure Greenpeace's Effectiveness

Jeffrey Piccirillo • March 2016

Greenpeace's goals for reducing drilling are more accepted in urban areas, and Greenpeace can be more effective in areas with lower federal land concentrations. This map combines both of these factors to create a "Success Index": a combined score ranking Greenpeace's effectiveness.

Five republican congressional districts with the highest concentration of wells are rated: Michael Burgess (TX) ranked highest (9), while Charles Boustany Jr. (LA) ranked lowest (3).
